

PRICES/PACKAGES:

Mobile Ob-Gyn, P.C. offers you a package that will include a DVD video of your ultrasound and a CD with still pictures taken during the ultrasound. This can be used to upload, print, or duplicate. The cost is \$175; \$225 for twins.

In many cases the images are incredible in their detail; however, the quality of the ultrasound is dependent on the position, movement of the baby, size of the mother, placental location and amount of amniotic fluid. Due to the time required to perform these ultrasounds, no refund is offered as a result of these conditions.

PAYMENT AGREEMENT & CONSENT

I understand that this procedure is not covered by my insurance plan and I agree to pay for this service. I further understand that this is not a diagnostic ultrasound and is not being used for the purpose of medical decision-making. The 3D/4D ultrasound is a limited ultrasound of the surface of the baby and I release Mobile Ob-Gyn, P.C. of all liability.

3D/4D Ultrasound

*Adding a
New Dimension
of Excitement
to the Joy of
Having a Baby*

Mobile Ob-Gyn, P.C.

Center for Women's Health

3D/4D Ultrasound:

Your bundle of joy isn't quite ready to arrive, but that doesn't mean you can't see your baby's precious little face in action. 3D/4D sonography provides 3D images and adds real-time motion to make up the fourth dimension.

Your baby's first "video" is captured while still in the womb using safe sound wave technology.

"Between 26 and 31 weeks of pregnancy is an ideal time to have a 3D/4D sonogram."

3D/4D ultrasound images have created quite a buzz among expectant moms and dads. "Wow!" is often their first response when they see their baby moving and even making faces!

This service is designed to be a special treat for expectant parents (& family members) and is not intended for diagnostic purposes. Ask your doctor about adding this new dimension of excitement to the joy of having a baby! It is also available to expectant mothers outside of the Mobile Ob-Gyn, P.C. practice.

Frequently Asked Questions:

HOW DOES THE 3D/4D SONOGRAM WORK?

The 3D/4D sonogram is a safe and non-invasive way to see inside the body using sound waves. It is not an x-ray. A probe placed on the skin emits sound waves into the body, listens for the return echo and generates an image.

HOW IS THIS DIFFERENT FROM THE 2D SONOGRAM?

The 3D/4D ultrasound provides an image of the surface of the baby. It does not replace the diagnostic 2D ultrasound used to screen for birth defects.

WHEN CAN I HAVE THE 3D/4D SONOGRAM?

Between 26 and 31 weeks of pregnancy is an ideal time to have a 3D/4D sonogram.

HOW LONG DOES IT TAKE?

Your 3D/4D ultrasound visit will last about 25 minutes.

DOES INSURANCE COVER A 3D/4D SONOGRAM?

An elective 3D/4D ultrasound is not covered by medical insurance. Payment is due prior to ultrasound.
